

.460 Rowland

Warning! **Notes:** Be careful with AAC-7 loads. It seems the burn rate has changed, and there appears to be more than one generation currently in the supply line. On the other hand, the powder gives excellent results and is among the best choices for the .460 Rowland. The Sierra bullet gave the best accuracy results. The XTP bullet would be the toughest for penetration on game, expanding well and holding together. The Nosler gives a bit more penetration than the Sierra but by a small margin, and the Nosler is very accurate. Begin at least 10 percent below powder charge. (Handloader Issue #247 - June, 2007)
